PROFESSIONAL SUMMARY

Junior–Mid Software Engineer with demonstrated experience designing and shipping full-stack, backend-heavy web applications using Node.js, Express.js, JavaScript, and Python. Proven track record of building and consuming RESTful APIs, engineering MongoDB and MySQL database schemas, and implementing JWT-based authentication from scratch — without relying on boilerplate. Currently a cadet in the 42 KL Core Programme (hosted at Sunway University), an École 42 network school that trains engineers through rigorous peer review, C programming, and project-based delivery with zero lectures. Comfortable working independently under pressure, contributing to code reviews, and writing clean, maintainable code aligned with team standards. Seeking a backend-focused engineering role where I can contribute to scalable Node.js/Python systems from day one.

TECHNICAL SKILLS

Backend	Node.js, Express.js, Python, REST API design, JWT authentication
Frontend	JavaScript (ES6+), TypeScript, React.js, HTML5, CSS3, Bootstrap
Databases	MongoDB (Mongoose), MySQL, NoSQL, SQL
Systems & C	C programming, memory management, Bash scripting, Unix/Linux, Makefile
Testing	Postman (API testing), manual integration testing — learning Jest
DevOps/Tools	Git, GitHub, Render (cloud deployment), Vercel, VS Code
Workflow	Agile/Scrum, peer code review, technical documentation
42 Skills	Peer evaluation, pair programming, self-directed learning, norm-compliant code

ENGINEERING PROJECTS

DailyFeed — Full-Stack Social Platform (Solo)

Feb 2026 – Apr 2026

Node.js · Express.js · MongoDB · JavaScript · REST API · JWT · Render · Live: dailyfeed-front-end-part.onrender.com

- **Delivered a production-ready backend API** serving 100% of application data — designed, built, and deployed end-to-end in under 8 weeks using Node.js and Express.js, replacing the instructor-provided API entirely to take full ownership of the system.
- **Engineered 12+ RESTful API endpoints** covering user registration, authentication, post CRUD, and image upload — each validated through Postman before frontend integration, reducing integration bugs to zero during UI development.
- **Implemented JWT-based authentication** handling user registration, login, logout, and session management — structuring auth as reusable Express middleware to protect all private routes consistently.
- **Designed a MongoDB schema with Mongoose** modelling 3 collections (users, posts, images) with cross-document references — enabling efficient querying without data duplication.
- **Shipped 6 user-facing features** including dark mode, profile and post image upload via Multer, and real-time DOM updates — consuming the self-built API from a Bootstrap/JavaScript frontend using Axios and Fetch API.
- **Deployed backend on Render and frontend on static hosting,** configuring environment variables via dotenv to separate development and production configuration — keeping zero credentials in source code.

libft — Custom C Standard Library (42 KL Core)

Jul 2026 – Present

C · Makefile · Memory Management · Peer Review · github.com/SellFares

- **Rebuilding 40+ standard library functions** in pure C from scratch — covering memory allocation (malloc/free), string operations, character classification, and linked list manipulation with no built-in functions permitted.

- **Writing norm-compliant, reviewable code** under strict 42 Norm: max 25 lines per function, no global variables, mandatory header guards — directly practising the clean, maintainable code standards expected in professional engineering teams.
- **Validated exclusively through peer evaluation:** every function reviewed and approved by fellow cadets simulating the code review culture of engineering teams — building habits of writing code that others can read and maintain.

EDUCATION & TRAINING

42 KL — Core Programme (Cadet)

Jul 2026 – Present

École 42 Network · Hosted at Sunway University, Kuala Lumpur · 42kl.edu.my

- **Passed the 42 Piscine:** a 26-day intensive selection process (July 2026) consisting of daily C programming and Shell scripting projects, peer evaluation sessions, and ranked logic exams — one of the most rigorous developer selection programmes in Southeast Asia.
- **Core Programme:** project-based curriculum with zero teachers and zero lectures — all milestones earned through code submission, peer review, and ranked exams. Developing C, Shell, Unix, and systems programming foundations alongside web skills.
- **Target:** complete Core Programme in 8–12 months alongside XMUM degree, with libft and Exam Rank 02 as immediate milestones by November 2026.

Bachelor of Engineering — Software Engineering (Year 2)

Sep 2024 – Present (Expected 2027)

Xiamen University Malaysia (XMUM) — Sepang, Malaysia

- **Relevant modules:** Computer Networks, Operating Systems, Database Systems, Computer Architecture, Software Engineering Principles, Data Structures, Python Programming.
- **Scholarship holder** — maintaining top 35% CGPA while simultaneously enrolled in 42 KL Core Programme.

Baccalaureate — Computer Science

Graduated 2024

Hannibal High School — Tunis, Tunisia

- **Graduated with distinction —** 16.42 / 20.

CERTIFICATIONS & STRUCTURED LEARNING

- Developing Front-End Apps with React · IBM
- Introduction to HTML, CSS & JavaScript · IBM
- Introduction to Software Engineering · IBM
- React.js Full Course · Tarmeez Academy (Udemy)
- Node.js — Express, MongoDB, REST API & Postman · Tarmeez Academy
- Advanced JavaScript Series · Tarmeez Academy
- Comprehensive JavaScript — Zero to Advanced · Tarmeez Academy
